

The *stick-to-the-subject* approach

We encourage a concise but comprehensive approach. Also, we encourage visual representation of a concept rather than text, whenever possible. Manuscripts in ultra-short formatting (max. 30 minutes for comprehension) are welcomed as following:

- **Abstract:** brief (in 3 statements: hypothesis, main results, main conclusion) comprising of graphics and narrative style when possible.
- **The Introduction** should consist of only the hypothesis and a brief description of the scientific context. For deeper understanding, bibliographic references should be indicated.
- **The Methodology** (Materials and Methods) should be comprehensively described in figure captions accordingly. Also, schematic conceptualization is strongly recommended for each data set.
- **Results** are exposed mainly as figures and tables (no limit in number).
- **Discussion** should be short, critical and comparative with the literature.
